

TABLE 5. RegressionFSII on the saved MLP Adult game ($d = 14, \ell = 3$). Two warmups use seeds 0 and 1; ten timed calls use seeds 0–9, one fresh estimator per seed with the same input. Time, RMSE and displacement are means across seeds; Max. abs. is the largest error across seeds. Per-seed displacement counts missing members of the exact Top-10 set. Errors and rankings exclude the empty interaction.

Budget	Mean time (ms)	Mean RMSE	Max. abs.	Mean displaced
1,000	14.47	1.56×10^{-3}	6.27×10^{-3}	0.20
4,000	53.26	4.27×10^{-4}	1.75×10^{-3}	0.00
10,000	159.86	1.74×10^{-4}	6.38×10^{-4}	0.00
16,384	91.33	6.75×10^{-7}	3.02×10^{-6}	0.00
100,000	91.04	6.75×10^{-7}	3.02×10^{-6}	0.00
